About me

I am a game design student with a strong foundation in computer programming and hands-on experience in Unity and C#. I am passionate about creating meaningful Worlds, gameplay systems, including progression, economy, and interaction design. I am actively involved in game jams and student communities such as BUG Zone and Games for Change, focusing on combining technical skills with creative design to build engaging player experiences.

Experience

Intern, Game Designer

Feb 2026 - June 2026

Luno Games

During my internship at Luno Games, I worked as a Game Design Intern on a sandbox multiplayer online racing project called "DRIFT RIVALS". I designed the full achievement framework across progression, racing, social, and economy systems, and developed Flash Event mechanics to increase competitive engagement. I created upgrade UI concepts aligned with tier-based rarity systems. I designed the in-game economy and lootbox architecture, and reward distribution logic, rarity balancing, and monetization flow.

Intern, Data Analyst Intern

Sep 2023 - July 2024

CMD Tech

I gained practical experience in SQL operations, learned how warehouse management systems function, and contributed to KPI reporting through C Report. This experience enhanced my understanding of data consistency, query optimization, and business operations. It was a rewarding journey that improved my technical skills.

Intern, IAU IT TEAM

Feb 2023 - June 2023

Istanbul Aydin University

During my internship, I provided on-site technical support to academic staff. I assisted professors with computer-related issues, troubleshooting software and hardware problems, and ensuring systems were operational. I also handled PC formatting, basic system installations, and resolved connectivity issues to maintain a smooth working environment.
